The benefits of programming in a functional style are well known. In particular, algorithms that are expressed as compositions of functions operating on sequences/vectors/streams of data elements are easier to understand and modify than equivalent algorithms expressed as loops. Unfortunately, this kind of expression is not used anywhere near as often as it could be, for two reasons: (1) most programmers are less familiar with this kind of expression than they are with loops, and (2) most pro ...

The tenet that students taking an introductory course (even, and especially, an experience course) should get some hands-on experience has gradually been accepted in the computer science community. The Student Operating System (SOS) provides: 1) a simple interface for simulating the simplified machine architecture, 2) a program which optimizes program execution, and 3) a ...
